

Co-Pilot

Co-Pilot is a security system that uses the NFC technology that is built in mobile phones and Raspberry Pi device to record user's attendance and entrance into the university campus.

We aim to provide a convenient and transparent way for students to register their attendance without holding any sort of identification, just bring your phone!

Features

- ✓ Logging with mobiles and Raspberry Pi via NFC
- ✓ We let you know when an instructor is late, and when you've been recorded as absent
- ✓ User friendly android-based system that works on iOS
